

Third Huge Freckled Elephant

Ethan Shenker, Constance Chen, Andrew Jiang, Saqif Abedin

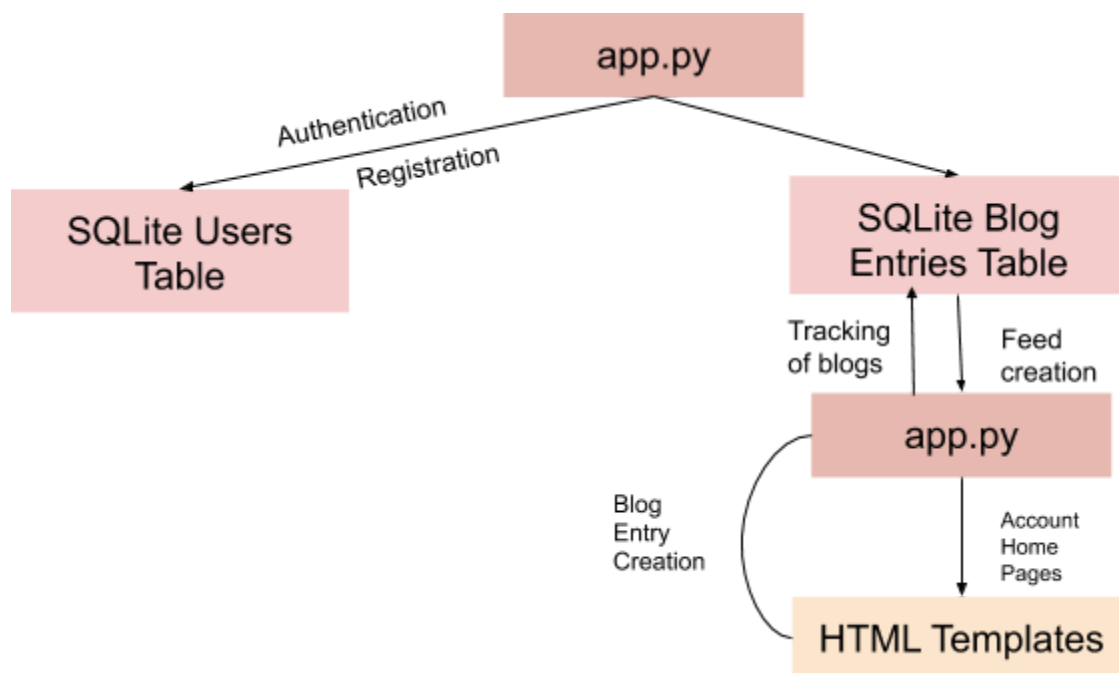

P0 - Da Art of Storytelling

Due 2020-12-22

Program Components + Relation:

- SQLite Database of Entries/Blogs: creates tables to organize information
- Flask App: serves as the framework for the website and connects front and back end
- HTML Templates and CSS: makes information user-friendly and easy to navigate

Component Map:

Database Organization:

- Database will organize the different users and their information
 - Table One keeps track of their usernames and passwords
 - Table Two keeps track of blogs and their posts -- creation of main feed chronologically would be easier this way
 - Table Three keeps track of individual posts
- Examples:

USERS

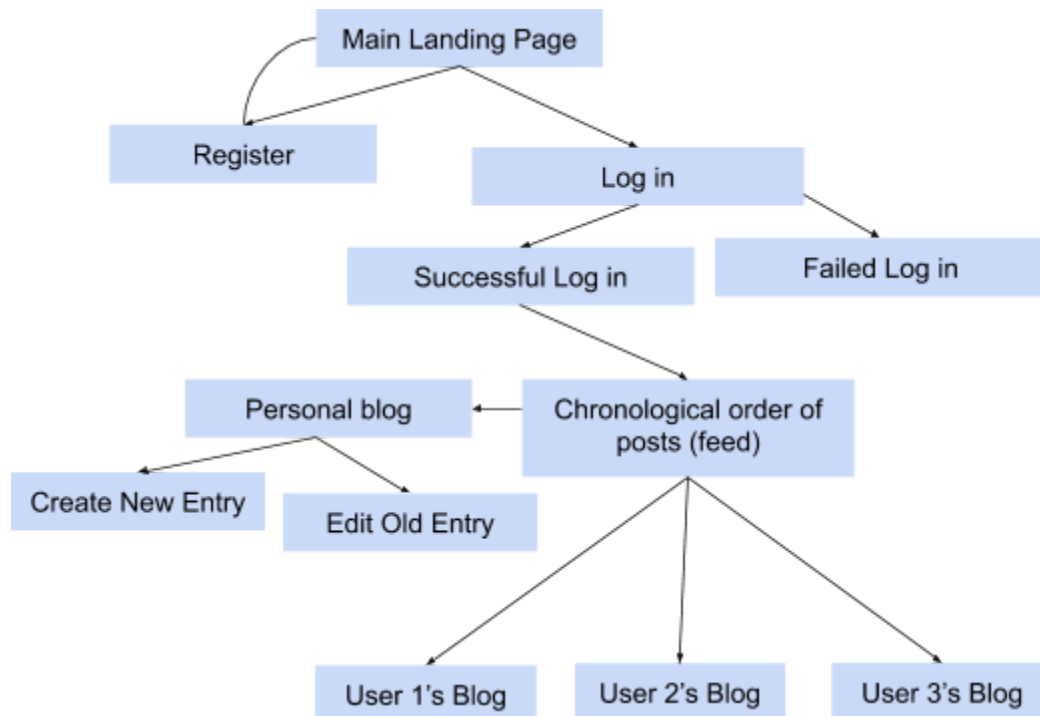

User ID (Int)	Username (text)	Password (text)
---------------	-----------------	-----------------

0	elephant	123pass
---	----------	---------

POSTS

Blog ID (Int)	User ID (Primary Int)	Creation Date (text)	Entry Title (text)	Content (files)
0	0	"December 21, 2020"	"What I Got for Xmas"	xmas.txt

Site Map:

Pages and Linkages:

- Main Landing Page
 - Register new account
 - Log into existing account
 - If logged in, users see a feed of blog posts
 - From feed user can access other people's pages
 - All posts created on blog in chronological order displayed
 - User can also view their own page
 - New Entry Page
 - Edit old entry Page
 - All posts created by that user displayed in chronological order

Breakdown of Tasks (to be divided as move forward):

- Landing Page
- Create Account Feature
- Login Feature
- Home pages for each account
- Main feed page
- Linkages between main feed and home pages for each account

Roles Assigned

- Ethan Shenker (PM)
 - Post Object Class
 - Creation / Maintenance of Post database
